Santa Clara University • Computer Science and Engineering Major • Mathematics Minor

Technical Skills

Python • JavaScript/TypeScript • REST APIs • JSON • Webhooks • Streaming API • Docker • AWS S3 • Git/GitHub • Postman • Grafana • Terraform • Ansible • Figma • HTML/CSS • GitHub Copilot • ChatGPT Integration • Claude Integration • MCP • Telemetry APIs • WordPress Integration • C • C++

Frameworks, Tools & Databases

React • Next.js • Vue.js • Postman • Grafana • InfluxDB • AWS Cloud Services • Docker Containers • GitHub Actions • Readme.io • Swagger.io • Claude Code

Methodologies

Agile/Scrum • CI/CD • Full-Stack Development • SDK Development • Object Oriented Programming • API Design • UX Research • Technical Documentation • DevOps Practices • Observability & Monitoring

HPE - Intermediate Technical Marketing Engineer

CA | Mar.2025 - Current

- Managed 8 high-touch enterprise accounts with custom-built automation scripts, dashboards, and integration solutions while supporting 30+ sales engineer engagements annually through product capability walkthroughs and live SDK and dashboard demos
- Led technical scoping engagements to identify capability gaps between customer requirements and existing product versions, communicating constraints clearly to sales teams, outlining solutions, and influencing deal outcomes
- Presented technical solutions to mixed audiences spanning C-suite executives to IT infrastructure teams, adapting communication depth and framing in real time to align business value for execs and technical depth for engineers
- Engineered and open-sourced a full-stack network monitoring demo environment (Next.js, Grafana, InfluxDB, Docker), converting a custom build into a self-service SE demo tool adopted independently across the field team
- Drove API adoption through scalable enablement assets including technical documentation, workflow guides, Postman collections, and SDK walkthroughs, generating 15,000+ pageviews with Fortune 500 adoption and YouTube technical content reaching 67,000 views
- Built MCP server integrations and developer-facing documentation enabling AI/LLM tooling adoption on Central API, and administered the HPE Aruba Networking Developer Hub on Readme.io at scale

HPE - Technical Marketing Engineer

CA | Sept. 2023 - Mar. 2025

- Redesigned HPE Aruba Networking Developer Hub (full-stack Next.js/React), leading UX research, Figma wireframing, and front-end development end-to-end; platform now serves 650,000+ annual pageviews and is the primary API discoverability surface for external partners and enterprise developers
- Built reusable partner integration assets (Postman collections, Python SDK modules, onboarding guides, webhook examples) designed for self-service adoption across MSP and enterprise customers, reducing the need for direct technical support and scaling enablement beyond one-to-one interactions
- Delivered custom automation solutions for 5+ high-touch customer engagements, writing Python scripts for device and client management workflows, scoping requirements, conducting enablement labs, and maintaining proactive communication through deployment

HPE - Technical Marketing Engineer Intern

CA | June - Sept. 2022

- Designed and built a full-stack automation platform (Next.js/React + AWS S3) from requirements gathering through production deployment within a fixed internship timeline, leading Figma wireframing, UX review sessions, and cross-functional collaboration with design, automation, and product stakeholders to deliver a production-ready solution

INRIX - Software Development Engineer Intern

WA | June - Sept. 2021

- Contributed to full-stack development of live traffic data products, building GraphQL data query layers and live-updating web pages in partnership with UX, backend engineers, and product management
